

ER Model

— means it's RDB related

— means it's NoSQL related

When ER-mapping for table schema,
simply ignore all red lines. (NoSQL has
no schema)

— means mixing NoSQL and
RDB

for NoSQL, we have the following collections: [for all the "?" below means I don't think it's a necessary attributes)

① exams:

- default
 - exam_id
 - in_course_id
 - create_by_user_id
 - exam_name
 - start_date
 - end_date
 - create_date
 - max_score
 - percentage
 - description
- optional
 - attachments

② materials:

- default
 - m_id
 - in_course_id
 - create_by_user_id
 - m_name
 - create_date
 - display_date
 - filename
- choose one
 - path_to_file
 - URL
 - description

③ assignments:

- default
 - ass_id
 - in_course_id
 - create_by_user_id
 - ass_name
 - creat_date
 - start_date
 - end_date
 - max_score
 - percentage
- optional
 - description
 - attachments

④ submitted_ass:

- default
 - s_ass_id
 - ass_id
 - submit_by_user_id
 - submit_user_course_tag
 - submit_date
- afterward
 - score
 - graded_by_user_id
- optional
 - description
 - attachments

⑤ post:

- default
 - post_id
 - title
 - post_by_user_id
 - post_user_custom_tags
 - description
 - post_date
 - comments
 - public
- optional
 - in_b_id
 - post_tags

⑥ notification:

- default
 - n_id
 - event_id
 - event_category
 - context
 - notified_date

⑪ taken_exam

default	{	t_exam_id
		exam_id
		taken_by_user_id
		taken_user_course_tag
interword	{	score
		graded_by_user_id
optional	{	description
		attachments
