

— means it's RDB related

— means it's NoSQL related

when ER-mapping for table schema,
simply ignore all red lines.
(NoSQL has no schema)

for NoSQL, we have the following collections: (for all the "?" below means I don't think it's a necessary attributes)

① exams:

- default: exam_id, in_course_id, create_by_user_id (?), exam_name, exam_date, create_date, description
- optional: attachments

② materials:

- default: m_id, in_course_id, create_by_user_id, m_name, create_date, week_num, color
- choose one: path_to_file, URL, description

③ assignments:

- default: ass_id, in_course_id, create_by_user_id (?), ass_name, create_date, end_date
- optional: description, attachments

④ submitted_ass:

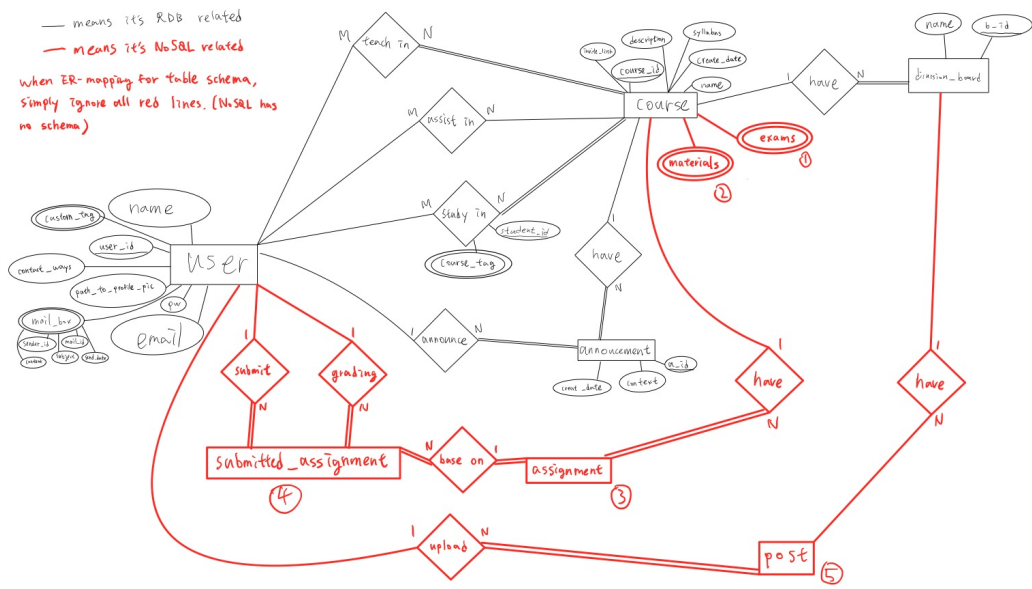

- default: s_ass_id, ass_id, submit_by_user_id, submit_user_course_tag, submit_date
- afterward: points, graded_by_user_id
- optional: description

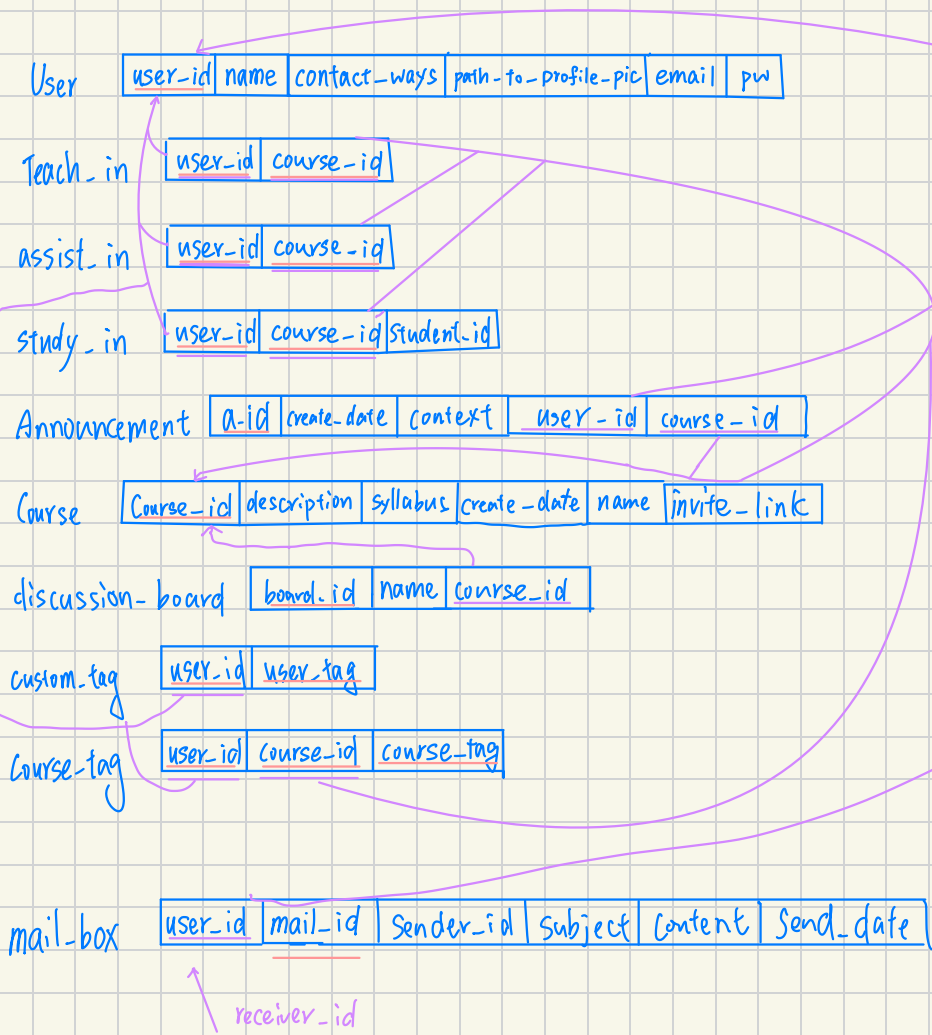

⑤ post:

- default
- post_id
 - title
 - post_by_user_id
 - post-user-custom-tags
 - description
 - post_date
 - comments
 - public
- optional
- tm-b-id
 - post_tags

— means it's RDB related
— means it's NoSQL related

When ER-mapping for table schema,
Simply Ignore all red lines. (NoSQL has
no schema)
